

Start

Finished

3:20 pm Saturday November 20th 6:12 pm

Function

✓ 1. Greet user

✓ 2. Pick a Word

✓ 10 words, different lengths

✓ 3. Say how many letters are in the word

✓ 4. User guesses a letter

- Correct - Show word & correct letters in it
- Incorrect - Show all incorrect letters

✓ 5. Show total guesses, correct guesses, & incorrect guesses

✓ 6. Ask for guesses until every letter is identified

↻ while (win == true)

✓ 7. Once all letters are guessed

- Tell user they have guessed the word correctly
- Tell user the number of total ~~guesses~~ guesses

✓ 8. Prompt: Play again or quit

- Play again
- Quit - Thank & end

* Fix

• correct guesses
records per
correct number
not guesses

Not a
Problem

* is a problem

Fix

Fixed

vector that Records guesses

How to record Words?

1. Strings

- easier code

2. Vector of char. - easier comparison

> Both?
